Sub: Submission of Newspaper Publication of Un-Audited Financial Results for the Quarter Ended 30th June, 2026

Dear Sir / Madam,

Pursuant to Regulation 47 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, we enclose herewith the clippings of the newspaper publication in Financial Express (English and Gujarati Edition) both dated 12-08-2026 wherein the Un-audited Financial Results of the Company for the quarter ended 30th June, 2026 have been published.

The aforesaid results were approved by the Board in its meeting held on 11th August, 2026.

Kindly take the above information on your record.
Thanking You,
For Borana Weaves Limited

FARMERS AT ODDS WITH GOVT OVER COMPENSATION FRAMEWORK

Gujarat's power push hits a land-value wall

NANDINI OZA
Ahmedabad, August 11

AT LOGGERHEADS

■ Revised compensation policy announced by Gujarat govt has failed to break the deadlock between the farmers and the state government

■ At the heart of that dispute is the Market Rate Committee, which the govt introduced to determine the prevailing market value

■ Gujarat is the first state in India to incorporate Centre's newly introduced lottery-based land valuation mechanism into its own transmission compensation framework

■ It may be recalled that the Union power ministry introduced the lottery mechanism in its amended Right of Way (RoW) guidelines, issued in December 2025

MORE THAN TWO months into Gujarat farmers' agitation against the installation of high-voltage transmission lines and electricity poles across agricultural land, a revised compensation policy announced by the state government has failed to break the deadlock between the farmers and the state government.

The government's resolution of July 4, 2026, shifted the basis of compensation from jantri rates (also known as the annual statement of rates or circle rate) to market value and promised upfront payment, but farmers say the new framework still leaves them bearing the economic cost of infrastructure that can restrict the use and future value of their land.

At the heart of that dispute is the Market Rate Committee (MRC), which the government introduced to determine the prevailing market value. Under this, three valuers are appointed—one nominated by the landowners, one by the transmission service provider, and one by the district collector. Two reports are to be selected by lottery.

The farmers have not only rejected the MRC but also its implementation. "The farmers will be at a loss as to the manner in which the calculations are to be done in the lottery system," Nehul Amruiya, one of the farm leaders heading the agitation, told *FE*. Amrutiya is the nephew of Kantilal Amrutiya, a minister in Gujarat. Protests are being held at different parts of the state with protetors holding banners of "not allowing BJP representatives in their villages."

Interestingly, Gujarat appears to be the first state in the country to incorporate the Centre's newly introduced lottery-based land valuation mechanism into its own transmission compensation framework.

It may be recalled that the Union Ministry of Power introduced the lottery mechanism in its amended Right of Way (RoW) guidelines, issued in December 2025. The guidelines provide for three valuers—nominated by the landowners, transmission service provider, and district magistrate—with two reports selected by lottery.

Gujarat's July 4, 2026 Government Resolution (GR) has now incorporated that exact mechanism into its compensation framework for new and ongoing transmission lines of 66 kV and above in the state. The GR expressly says two of the three sealed valuation reports are to be selected through a lottery.

What began as an agitation against Adani Energy Solutions' (AESL) 765-kV transmission project linked to the Khavda Renewable Energy Park has now snowballed into a much larger resistance to installation of transmission lines by all corporates.

"We are against all companies that are setting up transmission lines. The idea is to educate and empower each and every farmer regardless of transmission line(s) passing over their fields," Amrutiya said. Located near the Rann of Kutch, the renewable energy park is expected to become the world's largest, spanning over 72,600 hectares of barren land. The project, estimated to cost ₹1.5 lakh crore, has multiple developers.

At stake is 40 lakh bighas land and 4.50 lakh farmers in different districts of Gujarat, said Pratik Patel, one of the farmers, leading the protests.

Gold touches 2-month high of ₹1.57 lakh

PRESS TRUST OF INDIA
New Delhi, August 11

GOLD PRICES CLIMBED for the sixth straight session, rising ₹1,200 to a two-month high of ₹1.57 lakh per 10 grams in the national capital on Tuesday, as stronger investment demand by traders kept bullion elevated despite firm oil rates.

The yellow metal of 99.9% purity jumped ₹1,200 to ₹1,57,200 per 10 gram (inclusive of all taxes) from Monday's closing level of ₹1,56,000 per 10 gram, according to the All India Sarafa Association (AISA).

It had last traded near these levels on June 12, when it quoted ₹1,56,900 per 10 gram.

The precious metal added ₹9,800, or 6.65%, over the past six trading sessions, rising from ₹1,47,400 per 10 gram recorded on August 3.

Silver is also riding the same wave, soaring by ₹2,000 to ₹2,42,000 per kilogram (inclusive of all taxes), taking the white metal to its highest level in more than two months.

It was last seen trading around this level on April 30, when it was quoted at ₹2,42,700 per kg.

Gold extended its rally for a sixth consecutive session, climbing to its highest level in more than two months as investors increased safe-haven buying ahead of the US inflation data, which could provide fresh clues on the Federal Reserve's interest-rate outlook, Gaurav Garg, Head of Research at Lemonn Markets Desk, said.

House panel urges Railways to diversify freight basket

MANU KAUSHIK
New Delhi, August 11

INDIAN RAILWAYS NEEDS to diversify its freight basket beyond traditional bulk commodities such as coal, iron ore and cement and tap into faster-growing segments like automobiles, FMCG, e-commerce and fly ash, a parliamentary panel has said.

The committee has also recommended an annual review of freight rates, which have remained largely unchanged since 2018, taking into account commodity-wise competitiveness, market demand and operating costs. It said rationalising rates would help railways compete more effectively with road transport and encourage a shift towards rail.

The push for diversification comes as freight earnings remain heavily dependent on a narrow set of commodities. In FY26, coal accounted for more than 49% of the total freight loading.

The panel has called for zone-specific strategies to attract freight in regions with limited mineral movement and industrial activity, including targeted discounts for commodities that could shift from road to rail.

"The committee urge Indian railways to conduct a comprehensive analysis of its existing freight portfolio, identify commodities with low rail modal share but high growth potential, assess their specific logistical requirements and address operational bottlenecks that hinder their movement by rail," the report said.

Even though the panel noted that freight loading and revenue generation on the dedicated freight corridor (DFC) network have witnessed a significant uptrend in recent years, there is considerable scope of further improvement. This includes elimination of level crossings, deployment of 100 kmph capable wagons and implementation of the kavach safety system. Further, the committee recommended Railways to prioritise the development of new feeder routes and undertake capacity augmentation of existing feeder routes to ensure seamless connectivity between major industrial hubs and the DFC network.

Given the high capital needs of DFCs, the panel has urged Railways to make future projects more attractive to private investors

So far, around 2,741 km of has been commissioned, with freight trains on the DFC network averaging 37 kmph in FY25, compared with 23.8 kmph across the conventional railway network.

Crew availability has emerged as another issue. The panel flagged shortages of operating crew on DFCs stating that the lack of staff could undermine the benefits of dedicated high-capacity freight infrastructure. In its response, the railways said recruitment processes for assistant loco pilots and goods train managers are underway.

Additionally, the panel took note of the three additional freight corridors that are under the Railway Board review. Given the high capital requirements of DFCs, the panel has urged Railways to make future projects more attractive to private investors, offering "commercially viable and attractive terms." Meanwhile, the panel stressed that higher freight earnings are important not only to fund railway modernisation but also to keep passenger fares affordable.

Inventories strengthen food system from 'super' El Nino

NAVEEN THUKRAL & MAYANK BHARDWAJ
Singapore/New Delhi, August 11

NEAR-RECORD INVENTORIES, technological advances and the rise of key exporters such as Brazil and Russia have made the global food system more resilient to this year's "super" El Nino than similar past events.

World farm production has outpaced consumption and population growth since the 1980s, the UN Food and Agriculture Organization (FAO) and analysts say. The changes have been driven by higher-yielding crop varieties, greater use of fertiliser and improved irrigation and crop protection, lifting yields of staples such as rice, wheat, corn and soybeans.

"Even during drought conditions, better irrigation management and crop science mean we can still produce marketable yields," said Andrew Whitelaw of Australian agricultural consultancy Episode 3. "The potential impact on global food supplies and prices exists, but our improved preparedness means the disruptions are much less severe than they would have been in previous decades."

El Nino gathers force

Dryness brought by El Nino has already disrupted crop planting across large parts of Asia, including India, Southeast Asia and Australia, while shortages of fertiliser and diesel caused by the Iran war add to global food production risks.

India is battling a deficient monsoon season, while prospects of drier weather loom in Australia's key wheat-growing regions and crops across Southeast Asia, including Indonesia and Thailand, are suffering from lack of moisture.

The outlook could worsen, as an already strong El Nino will intensify in the fourth quarter and early next year, said Chris Hyde, a US-based meteorologist at satellite data and imagery firm SkyFi.

"Expectations are that it will be one of the strongest on record, or the strongest the world has ever seen, and that means the big impact of dryness has yet to come."
